Liam Huynh

DevOps Engineer

liamtamh@gmail.com | 647-771-4869 | linkedin.com/liamhuynh | GitHub.com/huynhli | Portfolio

Education

University of Toronto *Expected graduation: June 2027*
Bachelor of Computer Science, Mathematics *Toronto, ON*

Work Experience

Full Stack Developer | ***PostgreSQL, React, Role-based Access Control, GCP, Jira*** Oct. 2026 – Mar. 2027
BAREL Technologies Inc. *Toronto, ON*

- Created **CI/CD** pipelines to automate web deployments to staging, enabling quality control and mitigating risk prior to release
- Led **web and mobile E2E** framework implementations, coordinating with IT teams and cutting support requests by 90% within 2 weeks
- Standardized DevOps infrastructure and onboarding workflows via environment-specific **scripts and documentation**, increasing internal local environment reliability

Software Developer Intern | ***PostgreSQL, React, Role-based Access Control, GCP, Jira*** Jan. 2026 – Aug. 2026
Geotab *Toronto, ON*

- Developed device administration tooling for telematics fleet management
- Maintained 99%+ uptime using **GCP**, **Kubernetes**, Prometheus, and **Grafana** for deployment management, monitoring, and incident resolution across **30+ production releases**
- Developed an **internal AI harness** with domain-specific context and predefined tool calls, improving productivity for 100+ employees
- Engineered a **multi-agent automation pipeline** to streamline code reviews, CI testing, and release tracking, integrating **automated verification** into GitHub Actions CI/CD pipelines
- Authored technical specifications and deployment workflows, standardizing onboarding and knowledge transfer for 10+ teams
- Designed an **LLM-powered query-to-filter mapper** for devices using Semantic Kernel, prompt engineering, and confidence scoring, achieving up to **95%** query filtering accuracy

Full Stack Developer | ***Golang, React (TypeScript), Vitest, Docker, Agile*** Jul. 2025 – Aug. 2025
TBSP Games *Toronto, ON*

- Built and maintained 3 web applications for a video game company using Golang, **TypeScript**, React, HTML, and CSS
- Streamlined CI/CD pipelines by introducing **Docker containerization, Bash scripts, and GitHub Actions** for 3 projects, ensuring consistent developer environments and decreasing debugging time by **50%** across development, staging, and production
- Collaborated across 3 software and hardware teams in bi-weekly Agile Scrums using **Jira**, shipping E2E Epics 2 weeks ahead of deadlines

Projects

BirdWatch - Avian Data Management | ***AWS EC2, GitHub Actions, GHCR, Lighthouse, Vitest, Django Testing***

- Designed end-to-end **CI/CD** pipelines using **GitHub Actions** to automate linting, type checking, testing, and Lighthouse accessibility audits, enabling containerized full-stack deployments to **AWS EC2** via **GHCR** and Nginx reverse proxy

similarSongs - Song Recommendations API Hub | ***GitHub Actions, Docker, Golang, Vitest, Cypress, Postman, Testify***

- Automated CI/CD testing workflows using **GitHub Actions**, **Docker**, Vitest, Cypress, and Testify, validating full-stack functionality in under 10 minutes before production deployment

T'aides - Agentic Workflow | ***Python, FastAPI, YAML, Linux, OpenAPI, Docker, Rancher, IBM Cloud, Orchestrate***

- Engineered containerized **multi-agent automation workflows** using Python, FastAPI, Docker, **Rancher, and IBM watsonx Orchestrate**, standardizing tool integrations through 5+ OpenAPI specifications and enabling reproducible Linux testing environments

ScholarlySources - Search Peer-Reviewed Studies | ***MongoDB, Python, FastAPI, asyncio, HTTPX***

- Built an asynchronous academic paper collection pipeline using **Python, asyncio, and HTTPX**, concurrently retrieving and structuring **50+** peer-reviewed studies into **MongoDB Atlas** for semantic retrieval from unstructured web content
- Developed a **FastAPI REST endpoint** to expose paper search and retrieval functionality, enabling semantic queries with 5 filters

Technical Skills

Cloud & Infrastructure: GCP, AWS, Docker, Kubernetes, Linux, Bash, Nginx
CI/CD & Monitoring: GitHub Actions, Git, GitHub, Prometheus, Grafana, Jira
Backend & Databases: PostgreSQL, MongoDB, FastAPI, REST APIs, GraphQL, Postman
Languages: Python, Golang, SQL, JavaScript/TypeScript, C#
Frontend & Testing: React, Vitest, Cypress, Testify, pytest
